Agentic AI in Healthcare
- Transforming Healthcare Operations and Decision-making with Agentic AI Technologies

The Infocomm Media Development Authority (IMDA) invites you to a full-day seminar on Agentic AI in Healthcare. The event will explore how Agentic AI technologies are transforming healthcare operations and decision-making across clinical and related administrative environments.

To support awareness and capability building in agentic AI for healthcare, the program features Professor Hiroaki Kitano (President and CEO, SBX Corporation, Japan), who will share lessons from real-world deployments in Japan using Disha, SBX's platform for supply-side operations in hospitals and clinics. The workshop will also feature GIRI and GlobalHealthX initiatives from the Indian healthcare system, who will share perspectives on scaling and innovation in Agentic AI. Additionally, it will explore how MERaLiON — a LLM developed by A*STAR's I²R with support from IMDA — can enhance Agentic AI systems and voice agents in healthcare settings.

Join us to gain practical insights into implementation, examine sector-specific use cases, and explore opportunities to pilot and adopt Agentic AI solutions tailored for Singapore's healthcare landscape.

Workshop Highlights:

➢ Understand what agentic AI is and how it applies to healthcare

➢ Explore case studies from Japan and beyond on operational transformation using agentic AI

➢ Learn key design and deployment considerations for these systems

➢ Discover Singapore's MERaLiON model and its potential in Agentic AI systems and voice agents for healthcare

➢ Gain insight into ethical and responsible AI for clinical settings

➢ Explore collaboration pathways for pilot projects and experimentation

Date/Time:
Fri 29 August,
9.30am-5.30pm

Venue:
IMDA Level 4
Communal Café

10 Pasir Panjang Road, #04-01, Mapletree Business City, Singapore 117438

To Register:

This full-day program is highly recommended for healthcare professionals, administrators, technology leaders, and policymakers looking to integrate cutting-edge AI capabilities into their healthcare operations and clinical workflows. We look forward to your participation!
